

- Discuss about the amount of parcels in a exchanged voucher with Mr Kentish.
- discuss about the addition in the database specifically in the voucher table of a list of parcels that was changed for this voucher.

#### Return

- If the mount of parcels exchanged exceed the number of adults+child, open a new field asking for an explanation;
- create a field in the voucher SQL :
  - extra field for exchange information, regarding the idea above;
  - voucher need to have relation n:1 to the parcel table.
- Finish the print issued voucher with logo, instructions and necessary information for the distribution point staff be able to locate the voucher when it will be exchanged;
- [Optionaly] Create a report page saying what are the most needed food items.

#### Problem:

- The fields in Count In food items should display the numerical keyboard instead of the alphanumerical (DONE);
- In the Food Item page, the option Stock Levels is not retrieving the information from the Database (DONE).
- The new fields and interface of the voucher creation (DONE)
- The logic behind this new interface (javascript) (DONE)
