25/02/2014

Mr. Kentish brought his new tablet to test the system: Samsumg Galaxy Tab3 (8")
JP is telling how easy is to fill the database <- he is definitely

To do:
- In pack new parcel, the data field should dysplay only a numerical keyboard to insert the data;
- The user should be able to add, edit and delete locations in the location menu;DONE
- Agency field in the alphabetical order; DONE
- Clients should be searched typing the last name and then list of the clients are showed like in the consulting client menu;
- There are the report pages of parcels per location and parcels out-of-date, but they are not implemented;
- To start with a capital letter when is inserting a name (almost every field too?);
- Make the bottom "new client" look more like a bottom and not just a link.

ERROR!!
- The tablet is filling the registry fields with remembered passwords like a login field.
